TITLE: LIGHT PROTECTING SHEET AND METHOD FOR MANUFACTURING SAME

PRELIMINARY AMENDMENT

Commissioner of Patents
and Trademarks
Washington, D.C. 20231

Sir:

In conjunction with the filing of the present application, and prior to an initial Official Action on this matter, please amend the above-identified application as follows:

IN THE SPECIFICATION

In Paragraph [0007], the paragraph as follows:

The above and other objects, features and other advantages of the present invention will be more clearly understood from the following detailed description taken in conjunction with the accompanying drawings.

IN THE CLAIMS

In Claim 3, please substitute the claim as follows:

3. (Amended) The sheet as set forth in claim 2, wherein said two-component adhesive is mixed with a white pigment to fix the transparent film onto the aluminum-deposited film and to make the sheet appear white.

In Claim 4, please substitute the claim as follows:

4. (Amended) The sheet as set forth in claim 2, wherein said transparent film is comprised of polyethylene terephthalate.

A2
ensure

[In Claim 5, please substitute the claim as follows:]

5. (Amended) The sheet as set forth in claim 2, wherein the hot melt comprises an advertising subject of a real picture therein and is covered with a hot melt type laminate film to protect the advertising subject.

IN THE ABSTRACT

On page 7, please substitute the paragraph as follows:

A3

A light protecting sheet, capable of displaying an advertising subject of a real picture as an image of high resolution, is advantageous in terms of low production cost, excellent productivity and light-proof characteristic, and a method for manufacturing the same. The light protecting sheet includes an aluminum-deposited film, a transparent film coated onto one side of the aluminum-deposited film via a two-component adhesive, a white ink layer coated on the other side of the aluminum-deposited film, and a hot melt layer covering the white ink layer. In addition, such light protecting sheet can be manufactured by applying a two-component adhesive of white color on one side of an aluminum-deposited film, overlaying a transparent polyethylene terephthalate film on the adhesive, spreading white ink over the other side of the aluminum-deposited film, and coating a hot melt layer on the white ink layer.
